MPD Test Upload Pricing

The ASTM Standard D8152 requires iterative math calculations to converge on the Ksat result. To best facilitate this process, Upstream Technologies uses a cloud server to perform the heavy lifting of this mathematical process. Additional benefits of the cloud server are:

- Storage of infiltration data and results for future reference
- Integrated satellite imagery
- Consistent report formatting

Your MPD Account will allow you to access your results and download infiltration reports as many times as you like at no charge. You are only charged when you upload an infiltration test (one test credit for each test you upload).

Once you have depleted the test upload credits that came with your kit, you may purchase more at the following rates:

MPD INFILTROMETER		
Cloud Service Test Pricing		
# of Tests	Price Each	Total Cost
1	\$100	\$100
10	\$50	\$500
100	\$45	\$4,500
250	\$30	\$7,500
500	\$25	\$12,500
1000	\$20	\$20,000

Note:

If you upload a test that has insufficient data to calculate Ksat, it may produce a NULL result. This can happen if a test is ended prematurely and the water drop is less than 30 centimeters.

You will **NOT** be charged for NULL tests.

Make check payable to: Upstream Technologies Inc.

Or phone us with a credit card: 651-237-5123

Purchase and Payment Terms:

- Send Purchase Order with payment to Upstream Technologies, Inc.
- Payment is due prior to test credits being issued.
- All pricing is USD
- This quotation is firm through December 31, 2024
